

Wieland-KA1

CuAg0.1P | Highcopper alloy

Material designation

EN	CuAg0,1P CW016A
UNS	not standardized

Chemical composition*

Cu	balance
Ag	0.1 %
P	0.005 %

*Reference values in % by weight

Physical properties*

Electrical conductivity	MS/m	≥ 55
	%IACS	≥ 94
Thermal conductivity	W/(m·K)	~ 380
Thermal expansion coefficient (0–300 °C)	10 ⁻⁶ /K	17
Density	g/cm ³	8.9
Modulus of elasticity	GPa	110

*Reference values at room temperature

Corrosion resistance

Pure copper and high-copper alloys generally exhibit good corrosion resistance due to their precious character and are practically insensitive to stress corrosion cracking.

Product standards

Rod	EN 13601
Wire	EN 13601
Section	EN 13605
Tube	EN 13600

Material properties and typical applications

Wieland-KA1 is a high-copper with silver alloy. It is characterized by its resistance to hydrogen embrittlement according to EN ISO 2626. Through the addition of silver the softening temperature is increased without substantially influencing the electrical conductivity. Wieland-KA1 is therefore suitable for continuous loads at elevated temperatures.

Types of delivery

The BU Extruded Products supplies bars, wire, sections and tubes. Please get in touch with your contact person regarding the available delivery forms, dimensions and tempers.

Fabrication properties

Forming

Machinability (CuZn39Pb3 = 100 %)	20 %
Capacity for being cold worked	excellent
Capacity for being hot worked	excellent

Surface treatment

Polishing	
mechanical	excellent
electrolytic	excellent
Electroplating	excellent

Joining

Resistance welding (butt weld)	excellent
Inert gas shielded arc welding	excellent
Gas welding	excellent
Hard soldering	excellent
Soft soldering	excellent

Heat treatment

Melting range	1,083 °C
Hot working	750–900 °C
Soft annealing	400–550 °C 1–3 h
Thermal stress relieving	300–350 °C 1–3 h
